15-400 Milestone 3
`https://j-b-z.github.io/`

Jeremy Zhang (jbz)

February 2019

1   Milestone progress

This milestone goal was to discuss the chosen problems with Shah and his PhD students as well as problem solving techniques for these problems. To accomplish this, I scheduled weekly meetings with Shah and his PhD on Mondays to facilitate discussions. Furthermore, I have met with Nihar Shah this Monday to discuss the aspect of computation to show the negative result. Going into the next milestone, my goal is to tackle the negative result using several strategies discussed with Shah.

2   Changes

Currently, there are no changes to the rest of the milestones. However, the previous idea of using brute force computation to show the negative result does not seem applicable to this problem. I will continue to tackle the problem and will make changes according to progress made in the next following weeks.

3   Resources

I will not require any additional resources.
